Architecting Agentic AI Solutions – Workshop 2

Chen Junhua

Workshop Instruction

The user plans to run a batch job at a specified datetime. The agent should recommend the **best (region, start time)** within an allowed shift window to minimize carbon intensity—using the user's **allowed regions** and **allowed_shift_minutes** saved in memory, based on mock carbon intensity data.

- Download **carbon-aware-agent-workshop-colab.zip** and **Agentic_AI_Colab_Setup.ipynb** from Canvas
- Upload **Agentic_AI_Colab_Setup.ipynb** to google colab and follow the steps specified in the notebook
- Group assignment
- Due date: 11 Mar 2025
- You are required to find 2 issues and document the solutions
- Submit in word or pdf:
  - Issue
  - Solution
