Workshop

Form a group and think of an organisation that your team wants to represent.

Think of a scenario, problem statement or business use case that your team can consider to be solved using an AI product. Preferably choose a public facing application.

Discuss (guidelines):

1. What are the features and technologies that would be involved in the AI product?
2. AI Adoption consideration analysis
3. Who are the stakeholders and their responsibilities in this project?
4. What have to be done to convince the various stakeholders on the adoption of the AI.

Workshop

Assume that the system was deployed. After sometime, there are several complains and negative feedbacks being received, i.e., something has went wrong.

A task force was set up immediately to investigate what has happened.

Think about :

5. What are the potential complains & harm that are done.
6. From which affected parties are the complains from? (each member to think about a feedback and from which stakeholder)
7. Possible reasons that the AI system has gone wrong. State why the AI has performed in this manner. (Which stage/s during the AI model building stage is likely to contribute to the complain or error)
8. What could be done to mitigate these, in terms of
   - Fixing the problem and
   - Addressing the negative image of the organisation.

Workshop Submission

- Brainstorm and discuss within the group
- Document down what has been discussed and put it into a deck of slides
- Appoint someone within the group to share the group findings with other groups. (or individuals may present different sections)
- Write Group Name and **member names** clearly on the front slide.
- **Slide Title, e.g., : “Group 08.pptx”**
- **Individual submission into Canvas** after the presentation.
